

# TURN ON

## to RadioROM Cyberg

**103 tracks of the coolest music on a single disk.**

**10-hours of non-stop chillout, integrated with a custom player application. All yours for a cool £34.95+p&p**

Ever wished you could re-create that super-cool club chillout room at home. Ever wanted to tune the 'ads and talk' out of your radio station. Ever wanted to get horizontal without having to get up and change the cd every hour or so. Well chill dude, because all those things are now possible with RadioROM Cyberg.

RadioROM is a radically unique new music product. It combines all the best advantages of mp3 and Java technology to deliver you a music entertainment experience like no other by taking the compilation album into a different dimension.

Play it on your PC, your mp3 portable, your mp3-enabled DVD player or car system. The same disk works everywhere. There's no time-consuming encoding, no searching, no downloading required, no organising, no set-up to bother with - everything has been done for you. Plus, a lot of instant, one-touch functionality has been added-in to increase your pleasure.

With the RadioROM application installed on your PC you'll be able to automatically generate playlists, set the playlist duration from a single track to a full non-stop 10+ hours of 103 tracks. You can also select the playlist shape; fast to slow, slow to fast, peak in the middle, dip in the middle and random; select the average tempo and even cross-fade the tracks by a precise amount to create a seamless programme of music that would work in the very best club chillout room.

Please visit <www.radiorom.com/cyberg> for full specifications

The virtual reality interface means that the track's cd spines shuffle realistically in the selection and playlist racks. They can be dragged and dropped individually and inserted into the play programme as you wish. Create a 'DJ' set that's 'perfect' and you can save it forever with a few clicks.

It all takes just seconds to operate - and no matter what you adjust, the music is never interrupted. Just relax and let RadioROM Cyberg do everything for you or take complete control;

everything is dynamic, logical, intuitive and happens instantly.

The music on Cyberg has been selected from some of the uk's leading labels including: Twisted, Zomba, Catskills, Pussyfoot, Edel and Beechwood. Check out the track list on the right and if you'd like to preview the music visit [www.radiorom.com](http://www.radiorom.com) now. You'll be able to hear a loop of each of the 103 tracks, check out the source albums and order your copy. At just £34.95+p&p you won't find a music product that is cooler or better value for money.

To order your copy of Cyberg today just call 0800 123 4567 or order online at [www.radiorom.com](http://www.radiorom.com)

Cyberg is packed in a high-quality A4 sleeve which folds out full A3 size
